

FEATURES AND BENEFITS

- Continuous Ink Supply
- No mess during refilling
- Increased printing efficiency - Cost effective
- Refilling without interrupting printing.
- Degassed ink for more reliable and efficient printing.

OVERVIEW

The unique NUtec NUbis bulk ink system ensures a continuous supply of ink to any Epson type print head machine allowing more efficient printing with uninterrupted refilling, giving the functionality of a cartridge but with the advantages of a bulk system.

The NUbis system holds multiples of 2 x 1000ml degassed pouches, which are easy to replace when empty, even during printing, without disruption. Degassed pouches are generally more efficient especially when printing at the faster speeds and as such are more reliable than any conventional open bulk ink system.

Replacing the pouches can be done quickly and cleanly by way of a special connector valve which easily attaches to the nozzle of the pouch for fast, hassle-free refilling.

The empty pouches can be disposed of more efficiently than regular bottles as it can be compressed thereby taking up less space when disposing while the outer box is 100% recyclable.

The Nutec NUbis bulk ink system is designed to combine the reliability of a cartridge with the efficiency of a bulk ink system at a price which is affordable.
