## A35

## OVERVIEW

Amethyst A35 is a premium quality UV ink designed for a wide range of rigid and roll-to-roll applications. The Amethyst A35 is a high density colour ink that cures with LED as well as Mercury Vapour UV lamps.

The A35 bridges the gap between conventional rigid inks and roll-to-roll inks, providing the convenience of both in a single product. The A35 is also NVC free, ensuring the product is compliant with future regulatory requirements.

This formulation is designed for compatibility across a broad range of print head types and features a superior colour gamut for bright, vivid images.

Provided the inks are used in regular applications, using suitable substrates, the printed images will not fade unduly for up to two years.
